

1 country in a bankruptcy scenario. So they're novel claims.  
2 They are claims that were known at the time of the bankruptcy  
3 filing. The conversion right, even under the arguments that  
4 the convertible debenture holders are going to be making is  
5 known all those facts, all those provisions of the indenture  
6 that they're relying on. That was all known at the time of the  
7 bankruptcy filing. So any claims that they wanted to put this  
8 Court on notice and the debtors' estate on notice of should  
9 have been in the initial claims. Basically, when the second  
10 circuit, under the Midland Cogeneration Venture Limited  
11 Partnership versus Enron case looked at this and tried to  
12 figure out if this is a relation back situation, the Court  
13 focused on there must have been a timely assertion of a similar  
14 claim or demand evidencing an intention to hold the estate  
15 liable. Well, back when there was a bar date, that didn't  
16 happen. That was not in the vague language of, you know,  
17 "other potentially liquidated amounts." We're talking about a  
18 very sizeable claim here, Your Honor. Obviously, none of us  
19 know if it's allowed as a claim, what it would be allowed in,  
20 exact dollar amount and obviously that's not to be determined  
21 today, as we discussed earlier, but we know that it's a very  
22 large elephant as we've all said.

23 It is also an elephant that was in existence and  
24 known about at the time of the plan. And there is no  
25 discussion whatsoever in any of the respondents' papers about

1 why they didn't -- they had this delay. And furthermore they  
2 didn't even follow the proper procedure, Your Honor, for filing  
3 a late filed claim which would obviously be coming to this  
4 Court and explaining why they met the standards for excusable  
5 neglect under Pioneer and why they should be permitted to file  
6 a late filed claim or for that matter a subsequent amended, you  
7 know, on a late filed basis. And I think given that these  
8 claims should have been asserted back at the time of the filing  
9 there's really no question that these are belated claims that  
10 were knowable and should have been there. And the second  
11 circuit says when you're looking at the Pioneer test and the  
12 circumstance that you have to focus on the delay factors being  
13 the most important. Why was there a delay, was there a real  
14 reason for the delay. The second circuit in its cases,  
15 including in Midland, comments it takes a hard line on this  
16 point. And that it adopts the hard line approach. And here  
17 there just isn't any reason at all advanced -- not a single  
18 reason whatsoever advanced for the delay. I suggest to Your  
19 Honor that since the burden on the other side is to explain why  
20 they met the standards for being able to file these claims late  
21 filed, while they met the excusable delayed standards and why  
22 there's a reason for the delay and they haven't put in one  
23 piece of statement, one evidence about why. Your Honor, under  
24 that circumstances the claims have to be denied.

25 Even if Your Honor thought that these were just

1 amendments and that they really do relate back this still does  
2 not meet the standards the second circuit applied for  
3 amendments in these types of circumstances. The second circuit  
4 does look at things like the equities and the prejudice of  
5 parties. Mr. Kieselstein I think has done a very good job of  
6 explaining the prejudice that would be to the estate where we  
7 are now in this process of having all of a sudden these  
8 extremely large claims coming to the forefront and being  
9 allowed. The Court has to look at under those circumstances  
10 and consider certain things including the dilatory behavior on  
11 the part of the claimant which I think we clearly know here,  
12 whether other creditors would receive some kind of windfall if  
13 the amendment was not allowed. I don't think that this is that  
14 type of situation. Here none of the other creditors or the  
15 debtor assumed in their plan we were going to have to be  
16 dealing with these types of additionally large claims. They  
17 weren't knowable; they're not cognizable under the documents.  
18 There is obviously potential prejudice that would be to the  
19 entire estate and other creditors whose recoveries would be  
20 diminished by this and prejudice to claimants. And there's  
21 really no justification for them not being able to file this at  
22 the time of the filing of the plan.

23 Again, even under the test for amendments I think  
24 that they failed to justify why these claims shouldn't be  
25 disallowed even if the Court determined that they related back.

1 I think that they fail that test as well and therefore based on  
2 that we think that the claim should be disallowed because  
3 they're not supported by case law or the terms of the contract.  
4 They're not supportable expectation damages claims under the  
5 CalGen decision. And they are claims that should be denied on  
6 the basis that they were late filed claims or untimely claims.

7 MR. KAPLAN: Your Honor, Gary Kaplan from Fried  
8 Frank. We join in the arguments of the statement of Ms.  
9 Beckerman not to belabor the record. We just fully join in  
10 everything that they stated.

11 THE COURT: Anyone else want to be heard?

12 MR. DUNNE: Your Honor, Dennis Dunne from Milbank  
13 Tweed on behalf of the six percent convertible noteholders  
14 which we represent. Let me just frame the issue a bit as I see  
15 it and then I'll address Mr. Kieselstein's statement and Ms.  
16 Beckerman's arguments. But before I do I wanted to address  
17 some of the back and forth about CalGen.

18 I don't view us as some spawn of CalGen as Mr.  
19 Kieselstein tries to characterize us. We, in fact, were  
20 working with these noteholders prior to Your Honor's CalGen  
21 decision which I do think supports our position but this was an  
22 argument that we were going to raise regardless of the ruling  
23 in CalGen.

24 And that brings me to framing the issue. Because I  
25 think at its core, Your Honor, the matters are simple. Should

1 convertible noteholders be compensated for the loss of all  
2 their bargained for consideration or only some. And I think as  
3 we go through this it implicates kind of two key bankruptcy  
4 policies. One being the equality of treatment between a  
5 similarly situated creditors and the other is kind of avoidance  
6 of windfalls. We have a theme here that his is solvent; the  
7 equity is likely to receive meaningful distributions. So if  
8 you look at a world where you have two bondholders, one invests  
9 in a straight bond that's nonconvertible with a higher coupon.  
10 He has a tie of consideration that is principal and interest.  
11 The other bondholder elects to invest in a convertible  
12 instrument. He has a pie with three slices. He takes  
13 principal less interest and he gets this right to convert over  
14 time. And that is the key here. Because the question is all  
15 right, the debtors want to eliminate the entire pie, but they  
16 only want to pay principal and interest. So the holder of the  
17 straight bond will receive full compensation, the holder of the  
18 convertible bond will receive less than whole, maybe two-  
19 thirds, who knows what the percentage is but less than whole  
20 compensation. We think that issue is particularly acute in  
21 this case, Your Honor, where the debtor is solvent and denial  
22 of this claim in essence takes that value and that's not for  
23 today, it's for another day to determine the quantum of  
24 damages. But it takes whatever that value is and redistributes  
25 that wealth to the equity committee, who in our view, have no

1 cause to complain about this because it was their directors,  
2 their management team who was selected by their directors, who  
3 went out and chose access to capital markets when they did and  
4 became obligated not only to pay the lower coupon but to keep  
5 this convert right outstanding until 2014. We have a no call  
6 just like the lenders in CalGen to protect our consideration.  
7 Now, the currency of the consideration is different but the no  
8 call is designed to protect it, it protects our pot, the  
9 interest and the conversion right. Just like it protects the  
10 straight bondholders entitlement to interest over the length of  
11 the bond.

12 Which brings me, Your Honor, to I think the limited  
13 scope of today's hearing. It really is, is there liability, is  
14 there a breach of contract claim that is allowable as a result  
15 of the aggregation of the conversion right? It is not amounts.  
16 A lot of Ms. Beckerman's comments can go to amount. But we  
17 have to discount the likelihood that you would ever actually  
18 convert. Those are things we can hear experts testify on.  
19 We've retained Dr. Hull, a professor at the University of  
20 Toronto who has literally written a book on how you value,  
21 converts and options. And this is not some ivory tower  
22 esoteric analysis, this is how these instruments trade every  
23 day and which is the value of what our clients were receiving.  
24 The procedural posture here, Your Honor, is on March 27th we  
25 did file a supplement to the proof of claim. I'll address the

1 alleged lateness at the end of -- end of my arguments. But  
2 it's clear from Mr. Cieri's comments at the outset that that  
3 predated by months their filing of the Waterfall plan which  
4 incurred may not be the plan they proceed with because they are  
5 not seeking a plan sponsor reorganization plan. Ultimately,  
6 Judge, the debtors don't dispute several key aspects of the  
7 converts. I don't think they dispute that they obtained a  
8 lower coupon in exchange for the granting of the convert  
9 feature. I don't think they dispute that it was a fundamental  
10 aspect of the bargain for consideration. What they dispute is  
11 whether they have to pay anything for it if they eliminate it  
12 even in the context of a solvent case when equity is receiving  
13 meaningful distributions. And I -- I have to harp on one point  
14 here, Your Honor, which is we do have an unusual convertible  
15 feature which is very often you'll see a convertible bond that  
16 requires the bondholders even pre-bankruptcy to take their debt  
17 and use that as currency to get the stock. So that you never  
18 have a situation where they received cash for their principal  
19 and interest and get the stock. They either get cash,  
20 principal and interest or they convert and have their entire  
21 claim satisfied with stock, that's not our indenture. Our  
22 indenture expressly provides that when we convert we receive  
23 cash for principal and interest and there's a formula that  
24 basically says okay, at the time you convert it how much above  
25 the strike price was the stock trading at. And that delta is

1 then treated through the distribution of stock. And the  
2 noteholders have made it clear on that, Your Honor, that we're  
3 willing to live with that option through 2014. We're not  
4 looking for the elimination of that option solely to run it  
5 here and try to quantify it and make the claim we suggested to  
6 the debtor that we should replicate that, reinstate it, do  
7 something and we'll take the risk that it's never in the money.  
8 They've said that's unacceptable. We want to cash all the  
9 creditors out, we want to lower the burden of cashing it out  
10 and we'd like to do that by eliminate your convert right and  
11 not compensating you for it.

12 Now, Your Honor, let me just return to some of the  
13 key points that I think they've missed. The key nature of the  
14 convert is the duration. It is not capable of being eliminated  
15 on any particular day. We have the right to decide at our  
16 economic discretion what day to convert from now to 2014. We  
17 have a no call in the document to make sure that the debtors  
18 can't force us to take principal and interest. The debtors  
19 make much of the notion that there's a quick right, that if  
20 there's a change of control the --

21 THE COURT: You mean, you can exercise right now and  
22 join Mr. Kaplan's group, is that what you're saying?

23 MR. DUNNE: We could.

24 THE COURT: Okay.

25 MR. DUNNE: Though, we can't be forced to do it.

1 There's a difference between a foot and call which is key here.  
2 We could do it but they can't force us to do it. We have a  
3 right to see how this plays out to 2014 and then decide whether  
4 to join.

5 THE COURT: Mr. Kaplan might be upset because then  
6 you delude his group.

7 MR. DUNNE: He might be but as I said it's his  
8 agents, his directors that actually negotiated this deal. He  
9 can't complain about it. He may be upset but he can't complain  
10 about it. The key element is duration, Your Honor. The fact  
11 that there's massive vol --

12 THE COURT: All of these are with a very wide paint  
13 brush because you're going to say his directors, and it may  
14 very well be that his clientele came into existence two days  
15 ago.

16 MR. DUNNE: No, but it's clear. And I'm glad to  
17 brief this issue, Your Honor, that there are many cases that  
18 say in a solvent debtor when you are talking about allowing  
19 claims, equity cannot be heard in many circumstances when  
20 you're looking to allow claims that would give creditors the  
21 full benefit of their bargain. Because it was the directors.  
22 I agree with you, secondary markets they may have traded in and  
23 are out, they may not be the same people who voted in 2004 for  
24 that slate of directors but they have no cause to complain.

25 The key element, Your Honor, is duration. If you

1 look at -- any court that has looked at Black-Scholls or Jump-  
2 Diffusion or some of these other models other than this  
3 intrinsic value model that they presuppose is the right test,  
4 has rejected the intrinsic value model because you can't force  
5 us. With the no call and the other protections you can't force  
6 us to put up or shut up today. We have the right to either  
7 have an extent to 2014 or be compensated for that loss.

8                   Which brings me to the next key point which is  
9 acceleration maturity does that move from 2014 to 2005? On  
10 that a couple of points. I believe these are the same points  
11 that came up in CalGen and in the make whole where they  
12 basically said you know, this isn't a call in CalGen because  
13 post maturity you don't call it you just pay principal and  
14 interest that's due at maturity. So how could there be a  
15 breach of the no call where we've actually metaphysically, I  
16 don't know how, but we've actually past the maturity date. And  
17 that did not prevent Your Honor from ruling, correctly I  
18 believe, that there was an expectation with the no call that  
19 that bucket of consideration would survive to the light of the  
20 security and you would need to be compensated for it.  
21 Textually what they miss -- their whole argument is off of a  
22 form exhibit to the indenture, the form of note, which on it's  
23 face says "to the extent that there's any inconsistency between  
24 the note and the indenture in the terms the indenture  
25 provides." There's also nothing in the form of note that says

1 maturity is moved up from 2014. He has to resort to not only  
2 expert textual evidence but Black Law dictionary. So no  
3 contemporaneous evidence that they meant anything other than  
4 2014 by maturity.

5 But let's talk about some of the inconsistencies that  
6 would exist if you adopt their arguments, one of which we've  
7 talked about. Which is we've expressly had and preserved and  
8 bargained for the right to convert post default in the  
9 indenture. That was there for a reason so that we couldn't  
10 have this rush of maturity date or defaults that would deprive  
11 us of that option value. The other is that the indenture is  
12 unambiguous, that we have the right to convert, among other  
13 things as a number of triggers, but one of the triggers is that  
14 anytime after September 30, 2013. It doesn't say unless  
15 maturity has been moved up, it is unambiguous. If you accept  
16 their reading we have an inconsistency which I submit is  
17 resolved by the face of the note that says in terms of the  
18 indenture provide and to prove why I don't think that Mr.  
19 Kieselstein wants this reading is we have OID in these notes,  
20 we have original issued discount in these notes. And the note  
21 also has on the face of it a statement that says "principal  
22 amount of maturity equals 725 million dollars." The accrued  
23 amount on the petition was 547 million dollars without, unless  
24 you accept Mr. Kieselstein's argument that the maturity was  
25 moved up. In which case the claim will increase by 175 million

1 dollars as a result of saying okay, that's what the document  
2 says. Principal amount of maturity is the amount stated on the  
3 face of the form of note, 725 million dollars. I don't believe  
4 that's the case, Your Honor, because it's proving the  
5 absurdity, I believe, of this textual analysis.

6 Which brings me to a related point. Ultimately, Your  
7 Honor, their whole argument assumes that they can elect our  
8 remedies. And the cases that have considered the election of  
9 remedies, particularly the acceleration context, require an  
10 affirmative act by the noteholders. The put is a perfect  
11 example of it, they make much of this notion that were there a  
12 change of control outside of bankruptcy, we the convertible  
13 noteholders, would have a right to put the securities for  
14 principal and interest to the company and they would pay us  
15 that amount with nothing for the convert. They're actually  
16 wrong a little on the indenture because within certain  
17 parameters we actually cannot do that because it converts  
18 valuable. But put that aside that's a put, it's again our  
19 election. I agree that we have the right after a default, pre-  
20 bankruptcy let's say to go to state court and try to have this  
21 obligation satisfied by payment of principal and interest. But  
22 that's not what we did. And only that would constitute an  
23 election of remedies sufficient to say you're not compensated  
24 for your loss of consideration. They are trying to conflate  
25 the two by saying okay, the petition date's acceleration, it's

1 election of remedies and it's maturity date. And (a) those  
2 arguments were made before and I believe you rejected them and  
3 there's just no evidence of that in the indenture. The seventh  
4 circuit in the LDH case made an important point out of this  
5 where they denied a prepayment premium to the lender who had  
6 exercised remedies. The debtors cite this case because of the  
7 fact that the prepayment premium was denied but it was because  
8 they tried to exercise their remedies. They elected to lift  
9 the stay to foreclose on their collateral. Again, whatever  
10 they got pursuant to state court remedies. New York law is the  
11 same, Your Honor. New York Supreme Court has held that the  
12 acceleration of immediate payment to the exclusion of other  
13 rights "could be brought into being only by an election to  
14 accelerate affirmatively exercised by the plaintiff obligee.  
15 Any other holding would take the option of accelerating or not  
16 accelerating away from the person for whose benefit the clause  
17 is placed in the contract in the first place. That's the  
18 Simonim case.

19 Your Honor, let me just turn now to this argument  
20 about 502(b) for a second and whether or not we look at just  
21 the petition date to see whether the conversion right is in the  
22 money right or not. That's not what 502(b) says. It doesn't  
23 say that you adopt some intrinsic value task. I think it's not  
24 an issue for today because that's really quantum of damages.  
25 What they're saying, Judge, is yes there may be liability but

1 let's look at it on the petition date and let's set it at zero.  
2 I submit, Your Honor, that's precisely why we should take that  
3 into account and move it to an evidentiary hearing where you  
4 can have the benefit of hearing from Dr. Hull on this. It also  
5 leads to some absurd ramifications. Let's assume, Your Honor,  
6 that on the petition dates our strike price is three dollars  
7 and eighty-five cents compared to what Calpine stock was  
8 trading at which was much south of it, would lead you to say  
9 you know, I don't have to give you the money on that date even  
10 though the indentures say I can't price you out on any given  
11 day I'm going to do it.

12 What if Calpine stock at confirmation was trading at  
13 ten dollars a share, is that still an argument that anybody  
14 with a straight face would submit that you would then take that  
15 value that otherwise is contractually owed to us and give it to  
16 the equity. To say, yeah, 502(b) works that kind of windfall  
17 for junior classes. There is no evidence that it does that.  
18 Indeed, we all know that there are a number of exceptions to  
19 502(b). 502(b) also says that if you don't get unmatured  
20 interest, you don't get post-petition interest. But we all  
21 know that what you do in a solvent debtor that there are a lot  
22 of situations where 502(b) simply does not operate to dictate  
23 that you put blinders on as of the petition date. Think of a  
24 landlord who had a below market lease on the petition date, two  
25 years later it's rejected. Would anybody contend that you

1 could prove up that that loan had no lender had no damages  
2 because you have blinders on at the petition date and you say,  
3 you know what, the market was pretty good on the petition date.  
4 You therefore -- I know you can't actually mitigate now but you  
5 have no damages.

6 THE COURT: This is all conjecture, Mr. Dunne.

7 MR. DUNNE: No. It's the --

8 THE COURT: I've read all of your papers. Do you  
9 have anything that you don't have in your papers?

10 MR. DUNNE: One last point because I think I also  
11 don't mean this which is on the petition -- one of the key  
12 elements of valuing the conversion right as duration as I've  
13 talked about, we go to 2014. As of the petition date that's  
14 nine years. As of today that's only seven. One of the key  
15 drivers of value under a Black-Scholl's model is how long does  
16 that option have to run. I don't believe that the debtors  
17 truly believe that to give us an extra two years on a Black-  
18 Scholl's model.

19 Which brings me to a recent Delaware case, Your  
20 Honor, July 20th of this year. It's Lillis v. AT&T, 2007 WL  
21 2110587. Where the Delaware Chancery Court was faced with  
22 the issue of whether stock options that were being eliminated  
23 as part of an extraordinary transaction, in that case an  
24 acquisition through a merger, where the merger price was below  
25 the strike price of those stock options. And the argument was

1 exactly what the debtors and the other objectors are contending  
2 here, that look you're out of time, you're out of luck, too bad  
3 so sad, your strike price is above the merger price no damages.  
4 The Delaware Chancellery Court said no, because that's not how  
5 you value that option. You have to look at the remaining  
6 duration and they adopted a Black-Scholl's value to determine  
7 the damages from the loss of that stock option. So for  
8 purposes of today, Your Honor, I submit that that's sufficient  
9 for you to hold that there's liability, we'll come back and  
10 we'll talk about damages.

11 Let me address subordination of the 510(b), Your  
12 Honor. A couple of points here. I don't think anybody can ask  
13 that compensation for your key bargain for consideration is  
14 within the ambit of 510(b). And by that I mean 510(b)  
15 originated to deal with fraud under the securities laws. The  
16 language of it is broad, we all know that, we know how far the  
17 cases have gone. But none of them have said you know what, the  
18 failure to pay your coupon, the failure to pay your interest is  
19 510(b), because those are damages arising from the purchase or  
20 sale of the security. Going back to the pie analogy, Your  
21 Honor, that's why it's not 510(b). Because a straight  
22 bondholder has principal and interest, we have principal,  
23 interest and the conversion right which are all three buckets  
24 of key bargain for consideration. They had a no call where  
25 they could not eliminate or otherwise call us of principal and

1 interest. They could not eliminate that conversion right  
2 prematurity. So the compensation for the breach of those  
3 covenants and promises are key buckets of our consideration and  
4 not 510(b). A point that I don't think that the debtors  
5 dispute.

6 The point about equity risks. There are cases and we  
7 cite them, this is not an equity security, not defined in the  
8 bankruptcy as an equity security. Indeed, the securities law  
9 defines it differently. But for our universe of applicable law  
10 it is not an equity security, it also is not one where we have  
11 the risk that the cases talk about in 510(b). Why, because our  
12 principal and interest is not at risk. We have the debt, this  
13 is only an exchange for a lower coupon rate. We agreed to take  
14 that interest in the form of the conversion right. But unlike  
15 equity holders who put their dollars in and they never get  
16 their dollars out, they remain equity. We had the debt and it  
17 was never at risk. And I won't go through the cases, Your  
18 Honor, but they're in our brief.

19 The last point, which is similar to the make whole  
20 and the CalGen. I don't think the argument that it was 510(b)  
21 there, that the make whole or the CalGen compensation for the  
22 breach of the no call was somehow subordinateable under 510(b).  
23 But it is not. Ours is exactly the same, Your Honor. Our  
24 argument is that we are being compensated for direct  
25 consideration we bargained for that they are choosing to

1       eliminate completely under the plan. One last point on this.  
2       A lot of the cases that are cited throughout the briefs are not  
3       that relevant on 510(b) given where we rank, if you accept that  
4       it's 510(b). Why? Because a lot of those cases, the general  
5       unsecured class, was the last class case on the vine. So  
6       whether or not those courts dropped them right below the  
7       unsecured creditors carry with equity holders, somewhere else,  
8       it didn't really matter because there was no skin in the game.  
9       I think that the code is clear that even if it is 510(b) given  
10      the definition of equity security which expressly excludes  
11      converts we would be classified immediately junior to the  
12      general unsecured claim but senior to the equity.

13           The last argument, the late file proof of claim. The  
14      original proof of claim filed last August, Your Honor, stated  
15      that the debtors are obligated "for any and all other amounts  
16      due or to become due under the indenture and the six percent  
17      convertible notes whether now due or hereafter arising which  
18      amounts may be unliquidated or contingent may become fixed and  
19      liquidated in the future." Here the contingent claims the  
20      elimination of the conversion right under the plan constituting  
21      another breach of the contract. We also had a stipulation that  
22      was entered by Your Honor in January which allowed the  
23      principal and interest of the convert noteholders' claims and  
24      expressly said we will reserve any litigation on contingent  
25      claims for the plan process or the claim reconciliation

1 process. Which Your Honor, is precisely where we are now I  
2 submit. What we did after we were retained was ask the  
3 indentured trustee to clarify with detail, anticipating that  
4 they would make this argument which we think should not  
5 prevail, the clarification that they are -- if and to the  
6 extent they seek to eliminate the conversion right, we need to  
7 be compensated for that. Your Honor, they have put on no  
8 evidence today about prejudice, everything is to the contrary.  
9 They clearly knew about our claim in March of 2007, three  
10 months before the filing of the plan. In May of 2007 I believe  
11 Mr. Kieselstein stated to Your Honor that they were on track  
12 for filing a plan by June 20th, there were discussions with  
13 convertible noteholder groups about potential resolution of  
14 their claim for the loss of the future right to convert. But  
15 that they were still on track. Clearly, no prejudice. They  
16 put in no affidavits, produced no testimony or witnesses to  
17 prove up prejudice. And now we hear, despite the conclusory  
18 statements that plan negotiations were at an advanced stage in  
19 March, we're hearing that they're in the middle of a search for  
20 a plan sponsor who would raise capital and inject equity  
21 investments to cash out all the unsecured debt and provide a  
22 fixed recovery to the equity. I submit, Your Honor, that that  
23 belies the notion that they were in advanced stages of  
24 negotiating base.

25 The Enron case -- Your Honor, I want to point out one

1 factual distinction there. The second circuit (a) recognized  
2 that amendments, which I don't think this is, it's a supplement  
3 clarifying the proof of claim but that amendments are clearly  
4 allowed. But in Enron the facts dealt with new debtors, they  
5 were guaranteeing claims that were being filed against other  
6 debtors. So the original proof of claim was again one debtor  
7 but the guarantee claims had they been filed against other  
8 debtors so there was no -- there were clearly completely new  
9 proofs of claim against different debtors. Who, when you ran  
10 their claim register did not show any proof of claim with  
11 respect to the debt amounts.

12 A couple of last points. Your Honor, disallowance --

13 THE COURT: Just one.

14 MR. DUNNE: Okay. One.

15 THE COURT: You've gone way over anybody's allotted  
16 time here.

17 MR. DUNNE: And this goes to the proof of claim at  
18 insolvency. Equity here would gain a windfall by the  
19 disallowance of this proof of claim. And I submit, Your Honor,  
20 that as a result even if it was an untimely late filed proof of  
21 claim that otherwise shouldn't be allowed, insolvent estate  
22 late filed claims are. Section 726 says that in a liquidation  
23 that late filed claims have priority over distributions to the  
24 debtor and equity. Under 1129(a)(7) the best interest test  
25 says that a plan fails if we would do better in a hypothetical

1 Chapter 7 liquidation than we would under their plan. That's  
2 the reason frankly why post-petition interest is frequently  
3 paid insolvent cases, because you have a best interest test.  
4 If you look at where post-petition interest is slotted in at  
5 726 it's actually below late filed claims. So I --  
6 particularly at this case in a solvent estate I don't know what  
7 we're arguing about, Your Honor. And with that unless Your  
8 Honor has further questions?

9 THE COURT: I have none.

10 MR. HANSEN: Your Honor, I'll be very brief. Kris  
11 Hansen with Stroock & Stroock & Lavan on behalf of those  
12 certain seven and three quarter percent convertible  
13 noteholders. We agree completely with Mr. Dunne's comments.  
14 You read our papers, we have everything in the papers, Your  
15 Honor. I do want to point out for the Court that the language  
16 in our indenture Section 10.15(d) that Ms. Beckerman referred,  
17 that Mr. Kieselstein referred to, I want to read a little bit  
18 of language for the Court because people glossed over it a bit  
19 and it's critical to the analysis here. Because our view is it  
20 defeats the arguments on acceleration, the arguments on 502(b)  
21 and then earlier in that provision the arguments with respect  
22 to whether you have a traditional converter you have what's  
23 here a contingent converter. 10.15(d) states "if an event of  
24 default as set forth in Section 5.1(e) or (f) of the original  
25 indentures," and those are bankruptcy events of default so the

1 seven and three quarters were specific. So basically "in the  
2 event of a default based upon bankruptcy has occurred and is  
3 continuing, past tense, the company may not pay cash upon  
4 conversion of any notes and instead will make payment only  
5 through the diluted shares of common stock." We think that's  
6 critical because the other parties here have come to you and  
7 said Your Honor, we don't really know exactly what it says. It  
8 can't be harmonious with the concept of if you have an event of  
9 default the maturity date is brought forward and therefore you  
10 no longer have the conversion right. And so our read of this  
11 even though it doesn't say it is that it must just be that  
12 unique circumstance where you had a right to convert before the  
13 bankruptcy and you will then take your form of consideration  
14 after the bankruptcy has been filed. That's not what the  
15 provision says, the provision talks temporally it uses specific  
16 language. And I would note that unlike some of the other ones,  
17 the Model T indentures for example in CalGen etcetera which  
18 might have been based on ancient forms, these were negotiated  
19 two years ago, this was dated June of 2005. And so the intent  
20 of these documents could be ferreted out to the extent that if  
21 people don't think it's clear, we can have a further indentured  
22 hearing on it.

23                   But for today's purpose it says if that event of a  
24 default, the bankruptcy default, has occurred and is continuing  
25 the company may not pay cash upon conversion of the note.

1       Thereby stating pretty clearly that the conversion of the note  
2       can take place in the post-bankruptcy context and eviscerating  
3       all of the arguments laid out before you with respect to well,  
4       gee Judge, you have to evaluate it at 502(b) as of the date of  
5       the petition. And gee Judge, you have to look at this  
6       acceleration decision and say hey, it's gone. It's not gone,  
7       it expressly survives under our document.

8                   And the only other point I'd make, Your Honor,  
9       because we have gone way over with all these arguments is when  
10      you look at Section 10.15(b) of the seven and three quarter  
11      percent indenture it states clearly that these bonds upon  
12      conversion, and again, Mr. Dunne explained it, if you're in the  
13      money provides you both the cash recovery and the conversion  
14      right. We're not asserting that it's two legally distinct  
15      claims that we can strip off from one another and go out into  
16      public market places, strip it out and sell it, and then we  
17      should have had a recovery for this piece and a recovery for  
18      that piece. We're saying to you that it's one claim but it's  
19      two forms of consideration with respect to that claim under the  
20      terms of the indenture. And if you're going to take that right  
21      away from us, just like that right was taken away with respect  
22      to the CalGen holders that we should be compensated for it from  
23      a breach perspective. And I leave it at that, Your Honor.

24                   MR. FREDERICKS: Ian Fredericks with Young Conaway  
25                   Stargatt & Taylor on behalf of Manufacturers and the Trader's

1 Trust Company as indentured trustee. I rise only to say that I  
2 join in both Mr. Hansen's statements and adopt them for the  
3 reasons they said. I respectfully request that you overrule  
4 the objection. Thank you.

5 MS. REID: Your Honor, Sarah Reid of Kelley Drye &  
6 Warren on behalf of HSBC Bank as successor indentured trustee  
7 to the six percents and also for the 4.75 percent contingent  
8 convertibles. I do join in the arguments of Mr. Dunne and Mr.  
9 Hansen and respectfully request that you overrule the  
10 objection. I would, however, ask that whatever decision the  
11 Court makes the Court gives the party an opportunity to review  
12 any order because the one that was proposed by the debtor  
13 obviously was wrong in my view in terms of the law. If that  
14 were to be related to what Your Honor rules we would have some  
15 serious problems because it goes beyond those sections. Thank  
16 you, Your Honor.

17 THE COURT: Anybody want to be heard in response?

18 MR. KIESELSTEIN: Your Honor, we'll rest on the prior  
19 statements.

20 THE COURT: Very well. I guess, you're waiting to  
21 hear from me. Calpine and its affiliated debtors seek the  
22 entry of an order granting the debtors' limited objection  
23 pursuant to Section 502 of the Bankruptcy Code and Bankruptcy  
24 Rule 3007 to claims filed by the holders of certain unsecured  
25 convertible debt. The noteholders for that convertible debt

93

1 object.

2           Between 2000 and 2005 Calpine issue four series of  
3 unsecured convertible notes. As of the commencement of these  
4 Chapter 11 cases on December 20, 2005, the petition date,  
5 convertible notes were outstanding in the aggregate principal  
6 amount of approximately 1.8 billion dollars and consisted of  
7 approximately 1.3 million dollars four percent convertible  
8 senior notes due December 26, 2006, 547 million dollars six  
9 percent contingent convertible senior notes due 2014, six  
10 hundred and fifty million dollars 7.75 contingent convertible  
11 senior notes due 2015 and 634 million dollars 4.75 contingent  
12 convertible senior notes due 2023.

13           Generally, the convertible note indentures provide  
14 that prior to maturity the holders may convert the notes into  
15 cash and/or common stock. Upon the occurrence of one of a  
16 number of conditions precedent. As long as no event of default  
17 has occurred and provided one of the conversion conditions has  
18 transpired converting holders of the 4.75, the six percent and  
19 the 7.75 percent notes are entitled to receive (a) repayment of  
20 principal in cash and (b) payment of any upside different  
21 between the applicable conversion price and Calpine stock price  
22 in shares of Calpine common stock. Whereupon conversion the  
23 stock price is lower than the strike price the holders are not  
24 entitled to full repayment of the principal and may only  
25 receive their conversion value in cash. The indentures provide

1 that commencing a Chapter 11 case constitutes an event of  
2 default. Upon an event of default all notes shall be  
3 "immediately due and payable" without any further action or  
4 notice by the trustee or holders. The debtors filing their  
5 Chapter 11 cases constituted an event of default under the  
6 notes indentures thus rendering the notes due and payable  
7 immediately. None of the conversion conditions were satisfied  
8 on the petition date. By order dated April 26, 2006 this Court  
9 established August 1, 2006 as the bar date for filing proofs of  
10 claim.

11 On or about July 19, 2006 Wilmington Trust Company,  
12 as indentured trustee for the 7.5 percent notes, filed a proof  
13 of claim asserting claims for (a) principal and interest and  
14 (b) other unliquidated charges. On or about July 27, 2006 HSBC  
15 Bank, as successor indentured trustee for the four percent  
16 notes, the six percent notes and the 4.75 percent notes filed  
17 two proofs of claim asserting similar claims including "other  
18 unliquidated amounts." In connection with the four percent  
19 notes and the six percent notes and the 4.75 percent notes no  
20 mention was made in the original proofs of claim of any claim  
21 by virtue of any loss of a conversion right.

22 On January 5, 2007 the debtors and HSBC entered into  
23 a stipulation and order whereby the Court approved on January  
24 30th pursuant to which the parties stipulated to allow claims  
25 amounts for the principal and pre-petition accrued interest due

1 on account of inter alia each of the four percent notes, the  
2 six percent notes and the 4.75 percent notes. The parties  
3 reserve for a later date the determination of the appropriate  
4 rate of post-petition interest. On March, April and May of  
5 2007 the indentured trustees for the convertible notes filed  
6 "supplemental" proofs of claims seeking in addition to  
7 repayment of outstanding principal and accrued interest damages  
8 for "any breach" of the conversion rights, collectively the new  
9 claims.

10 On June 20, 2007 the debtors filed their plan and  
11 disclosure statement and under the most likely scenario with  
12 midpoint valuation and midpoint claims the debtors proposed to  
13 pay the noteholders the full amount of their principal and  
14 accrued interest as well as post-petition interest thereon at a  
15 rate to be determined by the Court together with reasonable  
16 pre-petition indentured trustees fees as provided for under the  
17 indentures pursuant to the plan.

18 The debtors object to the new claims first on the  
19 basis that they were not timely filed. To the extent this  
20 Court allows the noteholders to pursue their new claims the  
21 debtors would also object to the new claims to the extent they  
22 seek payment beyond principal and interest. The official  
23 committee of unsecured creditors and the official committee of  
24 equity holders join in the debtors' objection to the new  
25 claims. Are the new claims timely or untimely? The

1 noteholders filed their new claims approximately eight months  
2 after the bar date without first seeking Court approval. The  
3 noteholders argue that the new claims are not new claims but  
4 rather amendments to the noteholders original claims, I  
5 disagree. First, the new claims are not amendments because  
6 they do not relate back to the original claims. A claim  
7 relates back to a timely filed claim if it "(1) corrects a  
8 defect of form in the original claim, (2) describes the  
9 original claim with greater particularity or (3) pleads a new  
10 theory of recovery on the facts set forth in the original  
11 claim." See *Midland Cogeneration Venture Limited v. In re*  
12 *Enron*, 419 F.3d 115, 133, (2d Cir. 2005), *U.S. v. Kolstadt*, 928  
13 *Fed 2d* 171, 175, (5th Cir. 1991), "amendments to do not vitiate  
14 the role of bar dates. Indeed, courts that authorize  
15 amendments must ensure that corrections or adjustments do not  
16 set off wholly new grounds of liability. Courts must subject  
17 post bar date amendments to careful scrutiny to assure that  
18 there was no attempt to file a new claim under the guise of  
19 amendment," *In re Enron Corp.*, 419 F.3d at 133, citing *In re*  
20 *Integrated Resources*, 157 B.R. 66 and 70 (S.D.N.Y. 1993). "A  
21 claimant asserting relation back bears the burden of proof," *In*  
22 *re Enron Creditors Recovery Corp.*, 2007 W.L. 175, 653 at 5,  
23 (Bankr. New York June 13, 2007.) No application was ever made  
24 to this Court to bring before this Court the opportunity to  
25 pass on these amendments or alleged amendments.

1                   Here the new claims do not correct a form defect in  
2 the original claims, they do not describe the original claims  
3 with more particularity and they do not plead a new theory of  
4 recovery on the facts set forth in the original claims.  
5 Instead they assert entirely new claims seeking in addition to  
6 100 percent of the principal and interest due under the notes a  
7 double recovery based on conversion rights, See Ameritrust Co.  
8 v. Integrated Resources, 157 B.R. 66, 72 (S.D.N.Y. 1993), "The  
9 record contains evidence that the appellee's banks amended  
10 proofs of claims seek no interest in the amount of priority in  
11 the bank's original claims. This factor alone goes to support  
12 three of the five factors that need to be considered when  
13 balancing the equities."

Moreover the initial claims did not make any meaningful reference to the conversion claims, See Enron 419 F.3d at 143, whereas the Court must determine "whether there was a timely assertion of a similar claim or demand evidencing an intention to hold the estate liable." In Re Asia Global Crossing Ltd., 324 B.R. 503, 508, 509, (Bankr. S.D.N.Y. 2005) disallowing late amended claims because among other things the initial claim asserted only a general damage claim and did not provide notice of an amended claim. Although the noteholders have not quantified the new claims the debtors have been led to believe that the amounts claimed could be in the hundreds of millions of dollars. In addition, the noteholders waited

1 nearly eight and in some cases ten months after the bar date to  
2 file the new claims which to the extent they are cognizable at  
3 all existed on the petition date. See Enron 419 F.3d at 128,  
4 "in determining how long is too long, Courts generally consider  
5 the degree to which in the context of a particular proceeding  
6 the delay may disrupt the judicial determination of the case."  
7 The noteholders offer no excuse for this delay which has  
8 disrupted the judicial administration of the case in multiple  
9 ways. First, the noteholders filed the new claims doing the  
10 debtors' formulation of the plan and second, the timing of the  
11 new claims forces the debtors to deal with them when they  
12 should be focusing on the approval of the disclosure statement  
13 and confirmation of the plan. See Enron 419 F.3d at 122 citing  
14 Silivanch v. Celebrity Cruises, Inc., 333 F.3d, 355, 368 (2d  
15 Cir. 2003), "we and other circuits have focused on the third  
16 factor the reason for the delay including whether it was within  
17 the reasonable control of the movant."

18 In addition, as already noted the noteholders have  
19 led the parties to believe without specifically setting it  
20 forth that the amount sought under the new claims would be  
21 substantial and in the hundreds of millions of dollars. Indeed  
22 they concede that the claim or claims are elephantine in size.  
23 To the extent the new claims remain unresolved and unliquidated  
24 as of confirmation the reorganized debtors may have to maintain  
25 large reserves thereby delaying distributions to other

100

1 stakeholders who've timely filed proofs of claims and interest.

2 In addition to being time barred the new claims are without

3 merit. A convertible debenture is an indivisible unit. The

4 issuer has but one obligation to meet either redemption or

5 conversion, it can never be required to do both. See *Chock*

6 *Full O'Nuts v. U.S.*, 453 F.2d, 300 (2d Cir. 1971), likewise

7 the convertible notes debentures do not provide for recovery on

8 account of both debt and equity interest. Instead like all

9 convertible debentures the convertible notes provide the

10 security of a debt instrument but allow the noteholders to

11 benefit from any future upside by converting their notes to

12 cash and common stock. Once the noteholders have converted

13 their notes, however, they no longer hold debt interest to the

14 notes that have been converted. Accordingly, the convertible

15 noteholders cannot possibly be entitled to receive payment of

16 their debt and damages on the account of a conversion right.

17 See 11 U.S.C. 1129(B)(1)(b). See also *Chock Full O'Nuts*, 453

18 F.2d at 304, "convertible debentures provide for two mutually

19 modes of satisfaction." By repaying the noteholders principal

20 accrued interest in full the debtors are rendering the

21 alternative performance as provided in the indenture. See

22 *Chock Full O'Nuts*, 453 F.2d at 304, "the alternative to

23 conversion is that the issuer will redeem the debenture or pay

24 it at maturity. In which event the conversion privilege will

25 be terminated." Moreover, the conversion rights were not

1 exercisable as of the petition date when the notes were  
2 accelerated and matured. And thus the noteholders do not have  
3 allowable claims with respect to the conversion rights, See 11  
4 U.S.C. 502(b), a claim filed against the estate must be  
5 determined "as of the date of the filing of the petition." In  
6 re Einstein Noah Bagel Corp., 257 B.R. 499, 507 (Bankr.  
7 District of Arizona 2000.) At the time the case was filed the  
8 right to receive cash would not have yet matured because the  
9 put right itself had not yet become exercisable.

10 Lastly, even if the new claimants were cognizable  
11 they would be susceptible to subordination pursuant to Section  
12 510(b) of the bankruptcy code as claims arising from the  
13 purchase or sale of a security if the debtors. See Rembroe v.  
14 Dufrain, In re Med Diversified Inc., 461 F.3d 251, 259 (2d Cir.  
15 2006), "because of the binding agreement between the parties to  
16 turn a debt into an equity interest it is reasonably clear that  
17 Rembroe's claims was in line with policy concerns underlying  
18 Section 510(b)" See in Re Enron Corp., 341 B.R. 141, 162-63  
19 (Bankr. S.D.N.Y. 2006) "dealing with subordinating claims  
20 arising from ownership of employee stock options and concluding  
21 that the broad application of Section 510(b) is now quite  
22 settled." In re BT1 Communications, 304 B.R. 601, 608 (Bankr.  
23 E.D.N.Y. 2004), "holding nothing in Section 510(b)'s text  
24 requires a subordinated claimant to be a shareholder."

25 In conclusion, for the reasons just set forth the new

102  
1 claims were filed after the bar date and accordingly are time  
2 barred. Even were the new claims were to be allowed as timely  
3 amendments the claims for damages on account of the conversion  
4 rights under the indentures would be disallowed or at best  
5 subordinated. The four percent notes have already expired by  
6 their turns and could not be entitled to conversion right  
7 damages under any theory. Accordingly, the debtors' limited  
8 objection to the new claims is granted. Settle an order  
9 consistent with this decision.

10 MR. KIESELSTEIN: Thank you, Your Honor. I've given  
11 counsel's comments regarding the order. We'll puddle and  
12 submit and order to Your Honor as soon as possible.

13 THE COURT: Very well. Do you have anything else?

14 MR. SELIGMAN: Your Honor, the only matter that we  
15 have left on the agenda was an initial conference with respect  
16 to the Rosetta adversary. We would like to take that up in a  
17 chambers conference.

18 THE COURT: Sure. We'll do it in chambers after the  
19 call.

20 MR. SELIGMAN: Thank you, Your Honor.

21 (Whereupon these proceedings were concluded at 1:21  
22 p.m.)
